

Class X Session 2024-25 **Subject - Mathematics (Basic) Sample Question Paper - 2**

Time Al	lowed: 3 hours	Maximum Marks	: 80	
General Instructions:				
	1. This Question Paper has 5 Sections A, B, C, D and E.			
	2. Section A has 20 MCQs carrying 1 mark each			
	3. Section B has 5 questions carrying 02 marks each.			
	4. Section C has 6 questions carrying 03 marks each.			
	5. Section D has 4 questions carrying 05 marks each.			
	6. Section E has 3 case-based integrated units of assessment carrying 04 marks each.			
	7. All Questions are compulsory. However, an internal choice in 2 Qs of 5 marks, 2 Qs of 3 marks and 2 Questions of			
	2 marks has been provided. An internal choice has been provided in the 2 marks questions of Section E			
	8. Draw neat figures wherever required. Take $\pi=$	$\frac{22}{7}$ wherever required if not stated.		
		Section A		
1.	If a is rational and \sqrt{b} is irrational, then $a+\sqrt{b}$ is:	tr i	[1]	
	a) an irrational number	b) an integer		
	c) a natural number	d) a rational number		
2.	120 can be expressed as a product of its prime factor	ors as	[1]	
	a) $_{15} \times 2^3$	b) $5 \times 2^3 \times 3$ d) $10 \times 2^2 \times 3$		
	c) 5 × 8 × 3	d) $10 \times 2^2 \times 3$		
3.	If the equation $9x^2 + 6kx + 4 = 0$ has equal roots th	en k = ?	[1]	
	a) -2 or 0	b) 0 only		
	c) 2 or 0	d) 2 or -2		
4.	The value of k for which the system of linear equations $x + 2y = 3$, $5x + ky + 7 = 0$ is inconsistent is:		[1]	
	a) $-\frac{14}{3}$	b) 5		
	c) $\frac{2}{5}$	d) 10		
5.	A quadratic equation whose one root is 3 is		[1]	
	a) $x^2 - 5x + 6 = 0$	b) $x^2 - 6x - 6 = 0$		
	c) $x^2 - 5x - 6 = 0$	d) $x^2 + 6x - 5 = 0$		
6.	If (a, 0), (0, b) and (x, y) are collinear, then		[1]	

Page 1 of 18

23. A quadrilateral ABCD is drawn to circumscribe a circle. Prove that AB + CD = AD + BC

[2]

- 24. If $\sin \alpha = \frac{1}{\sqrt{2}}$ and $\cot \beta = \sqrt{3}$, then find the value of $\csc \alpha + \csc \beta$. [2]
- 25. An umbrella has 8 ribs which are equally spaced (see figure). Assuming umbrella to be a flat circle of radius 45 [2] cm, Find the area between the two consecutive ribs of the umbrella.

Find the area of the segment of a circle of radius 14 cm, if the length of the corresponding arc APB is 22 cm.

Section (2
-----------	---

26. Explain why 7 × 11 × 13 + 13 and 7 × 6 × 5 × 4 × 3 × 2 × 1 + 5 are composite numbers. [3]
27. Find the zeroes of the given quadratic polynomials and verify the relationship between the zeroes and the [3]

coefficients.6x² - 3 - 7x
 28. The sum of the digits of a two-digit number is 9. Also, nine times this number is twice the number obtained by [3] reversing the order of the number. Find the number. Solve the pair of the linear equation obtained by the elimination method.

The sum of a two-digit number and the number obtained by reversing the order of its digits is 165. If the digits differ by 3, find the number.

- 29. ABCD is a quadrilateral such that $\angle D = 90^{\circ}$. A circle C (O, r) touches the sides AB, BC, CD and DA at P, Q, R [3] and S respectively. If BC = 38 cm, CD = 25 cm and BP = 27 cm, Find r.
- 30. Prove that $\frac{\sin\theta \cos\theta + 1}{\sin\theta + \cos\theta 1} = \frac{1}{\sec\theta \tan\theta}$, using identity $\sec^2\theta = 1 + \tan^2\theta$. [3]

Prove:
$$\frac{1}{(\cot A)(\sec A) - \cot A} - \operatorname{cosec} A = \operatorname{cosec} A - \frac{1}{(\cot A)(\sec A) + \cot A}$$

31. Two different dice are rolled together. Find the probability of getting (i) the sum of numbers on two dice to be 5, [3](ii) even number on both dice, (iii) a doublet.

Section D

32. A rectangular field is 20 m long and 14 m wide. There is a path of equal width all around it, having an area of [5]111 sq m. Find the width of the path.

OR

If the price of a book is reduced by \gtrless 5, a person can buy 5 more books for \gtrless 300. Find the original list price of the book.

- 33. If BD and QM are medians of triangles ABC and PQR, respectively, where $\triangle ABC \sim \triangle PQR$, prove that [5] $\frac{AB}{PQ} = \frac{BD}{QM}$.
- 34. A solid is in the shape of a cone surmounted on a hemisphere with both their diameters being equal to 7 cm and **[5]** the height of the cone is equal to its radius. Find the volume of the solid.

OR

A solid consisting of a right cone standing on a hemisphere is placed upright in a right circular cylinder full of water and touches the bottom. Find the volume of water left in the cylinder, if the radius of the cylinder is 60 cm and its height is 180 cm, the radius of the hemisphere is 60 cm and height of the cone is 120 cm, assuming that the hemisphere and the cone have common base.

35. The following table gives the distribution of the life time of 400 neon lamps:

[5]

Lite time (in hours)	Number of lamps
1500-2000	14
2000-2500	56
2500-3000	60
3000-3500	86
3500-4000	74
4000-4500	62
4500-5000	48
Find the median life time of a lamp	

Find the median life time of a lamp.

Section E

36. Read the following text carefully and answer the questions that follow:

[4]

Saving money is a good habit and it should be inculcated in children right from the beginning. Rehan's mother brought a piggy bank for Rehan and puts one \gtrless 5 coin of her savings in the piggy bank on the first day. She increases his savings by one \gtrless 5 coin daily.

Based on the above information, answer the following questions:

- i. How many coins were added to the piggy bank on 8th day?
- ii. How much money will be there in the piggy bank after 8 days?
- iii. a. If the piggy bank can hold one hundred twenty ₹ 5 coins in all find the number of days she can contribute to put ₹ 5 coins into it.

OR

Page 5 of 18

b. Find the total money saved, when the piggy bank is full.

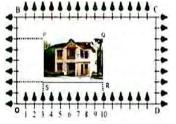

37. Read the following text carefully and answer the questions that follow:

Using Cartesian Coordinates we mark a point on a graph by how far along and how far up it is.

The left-right (horizontal) direction is commonly called X-axis.

The up-down (vertical) direction is commonly called Y-axis.

In Green Park, New Delhi Suresh is having a rectangular plot ABCD as shown in the following figure. Sapling of Gulmohar is planted on the boundary at a distance of 1 m from each other. In the plot, Suresh builds his house in the rectangular area PQRS. In the remaining part of plot, Suresh wants to plant grass.

i. Find the coordinates of the midpoints of the diagonal QS. (1)

ii. Find the length and breadth of rectangle PQRS? (1)

iii. Find Area of rectangle PQRS. (2)

OR

Find the diagonal of rectangle. (2)

38. **Read the following text carefully and answer the questions that follow:**

Two trees are standing on flat ground. The angle of elevation of the top of Both the trees from a point X on the ground is 60°. If the horizontal distance between X and the smaller tree is 8 m and the distance of the top of the two trees is 20 m.

- i. Calculate the distance between the point X and the top of the smaller tree. (1)
- ii. Calculate the horizontal distance between the two trees. (1)
- iii. Find the height of big tree. (2)

OR

Find the height of small tree. (2)

Solution

```
Section A
```

```
(a) an irrational number
1.
```

Explanation: Let a be rational and \sqrt{b} is irrational. If possible let $a + \sqrt{b}$ be rational. Then $a + \sqrt{b}$ is rational and a is rational. $\Rightarrow \left \lceil \left (a + \sqrt{b}
ight) - a
ight
ceil$ is rational [Difference of two rationals is rational] $\Rightarrow \sqrt{b}$ is rational. This contradicts the fact that \sqrt{b} is irrational. The contradiction arises by assuming that $a + \sqrt{b}$ is rational.

Therefore, $a + \sqrt{b}$ is irrational.

```
2.
```

```
(b) 5 \times 2^3 \times 3
```

Explanation: We have,

 $120 = 5 \times 2^3 \times 3$

```
3.
```

```
(d) 2 or -2
```

(d) 10

Explanation: Since the roots are equal, we have D = 0.

ing & Guidance $\therefore 36k^2 - 4 \times 9 \times 4 = 0 \Rightarrow 36k^2 = 144 \Rightarrow k^2 = 4 \Rightarrow k = 2 \text{ or } -2.$

4.

Explanation: For a system of equations $a_1x + b_1y + c_1 = 0$; $a_2x + b_2y + c_2 = 0$ to have no solution, the condition to be satisfied

is $\frac{a_1}{a_2} = \frac{b_1}{b_2} \neq \frac{c_1}{c_2}$ $\Rightarrow \frac{1}{5} = \frac{2}{k} \neq \frac{-3}{7}$

: For k = 10, the given system of equation is inconsistent.

```
(a) x^2 - 5x + 6 = 0
5.
```

Explanation: since 3 is the root of the equation, x = 3 must satisfy the equation.

Applying x = 3 in the equation $x^2 - 5x + 6 = 0$

gives, $(3)^2 - 5(3) + 6 = 0$ \Rightarrow 9 - 15 + 6 =0 \Rightarrow 15 - 15 = 0 $\Rightarrow 0 = 0$ \Rightarrow L.H.S. = R.H.S.

Hence, $x^2 - 5x + 6 = 0$ is a required equation which has 3 as root.

6.

(c) ay + bx = ab

Explanation: If given points are collinear, then the area of the triangle formed by these three points is 0.

```
: Area = \frac{1}{2}|a(b - y) + 0(y - 0) + x(0 - b)| = 0
\Rightarrow \frac{1}{2}|ab - ay - bx| = 0
\Rightarrow ab - ay - bx = 0
\Rightarrow ay + bx = ab
```

```
7.
```

(b) 15 cm

Page 7 of 18

Explanation: ^{3 cn} 2.5 cm R C E 2 cm 4 cm $\triangle \text{DEF} \sim \triangle \text{ABC}$ AB = 3CM, BC = 2 CM, CA = 2.5 CM, EF = 4CMSince riangle 's are similar, we have $\frac{\overline{DE}}{\overline{AB}} = \frac{\overline{EF}}{\overline{BC}} = \frac{\overline{FD}}{\overline{CA}}$ $\Rightarrow \frac{\overline{DE}}{3} = \frac{4}{2} = \frac{\overline{FD}}{2.5}$ $Now \frac{DE}{3} = \frac{4}{2}$ $\Rightarrow DE = \frac{3 \times 4}{2} = 6cm$ and $FD = \frac{4}{2} \Rightarrow FD = \frac{4 \times 2.5}{2} = 5 cm$ perimeter of $\triangle DEF$ = 6 + 4 + 5 = 15cm 8. (d) 2.25 cm Explanation: By BPT $\frac{AD}{DB} = \frac{AE}{T}$ ECAE ${}^{4}_{AE} = \frac{3}{9}_{4}$ AE = 2.25 cm 9. (d) 16 cm Explanation: 0 0 Since op is perpendicular to PQ, the $\angle OPQ = 90^{\circ}$ Now, in right angled triangle OPQ, $OQ^2 = OP^2 + PQ^2$ \Rightarrow (20)² = (12)² + PQ² \Rightarrow PQ² = 400 - 144 $\Rightarrow PQ^2 = 256$ \Rightarrow PQ = 16 cm **(a)** 30^o 10. **Explanation:** $\sqrt{3} \tan 2\theta - 3 = 0$ $\Rightarrow \sqrt{3} \tan 2\theta = 3$ $\Rightarrow \tan 2\theta = \frac{3}{\sqrt{3}}$ $\Rightarrow \tan 2\theta = \sqrt{3}$ $\Rightarrow \tan 2\theta = \tan 60^{\circ}$ $\Rightarrow 2\theta = 60^{\circ}$ \Rightarrow θ = 30° 11. (d) 21.65 m **Explanation:** Let the height of the tree be h. In riangle PAT, tan $60^{\circ} = \frac{h}{x} \Rightarrow \sqrt{3} = \frac{h}{x} \Rightarrow h = \sqrt{3} x$ In \triangle QAT, tan 30° = $\frac{h}{50-x} \Rightarrow \frac{1}{\sqrt{3}} = \frac{h}{50-x}$ Page 8 of 18

BEST OF LUCK 👔 @vcgc.aligarh 🞯 @vcgc_aligarh 💙 @VCGC Aligarh 🔼 VCGC Online 💽 📰 VCGC Online App

(2 kings + 2 queens + 2 jacks). \therefore P (getting a face card) = $\frac{6}{52} = \frac{3}{26}$ 16. **(a)** 67.5 **Explanation:** Mode = $l + \left(\frac{f_1 - f_0}{2f_1 - f_0 - f_2}\right) \times h$ $= 60 + \frac{16-6}{2 \times 16-6-6} \times 15$ = $60 + \frac{10}{32-12} \times 15$ = $60 + \frac{10}{20} \times 15$ = 60 + 7.5 = 67.5 17. (a) $\pi \, cm^3$ 1 **Explanation:** Radii of cone = r = 1 cm Radius of hemisphere = r = 1 cm(h) = 1 cmHeight of cone (h) = 1 h = 1 cm Volume of solid = Volume of cone + Volume of a hemisphere $= \frac{1}{3}\pi r^{2}h + \frac{2}{3}\pi r^{3} = \frac{1}{3}\pi r^{2} (h + 2r)$ $= \frac{1}{3} \times \pi \times (1)^{2} (1 + 2 \times 1)$ $=\frac{1}{3} \times \pi \times 3 = \pi \text{ cm}^3$ 18. **(b)** 60 - 80 **Explanation:** Total frequencies (N) = 10 + 12 + 14 + 13 + 17= 66 So, $\frac{N}{2} = \frac{66}{2} = 33$ c.f. Just greater than 33 is 36 and the corresponding class is 60 - 80 hence, median class = 60 - 8019. (b) Both A and R are true but R is not the correct explanation of A. **Explanation:** It will be $\sqrt{(a-0)^2+(b-0)^2}=\sqrt{a^2+b^2}$ (a) Both A and R are true and R is the correct explanation of A. 20. Explanation: It is a result. Section B 21. Given equations are 6x - 3y + 10 = 02x - y + 9 = 0Comparing equation 6x - 3y + 10 = 0 with $a_1x + b_1y + c_1 = 0$ and 2x - y + 9 = 0 with $a_2x + b_2y + c_2 = 0$,

We get, $a_1 = 6$, $b_1 = -3$, $c_1 = 10$, $a_2 = 2$, $b_2 = -1$, $c_2 = 9$ We have $\frac{a_1}{a_2} = \frac{b_1}{b_2} \neq \frac{c_1}{c_2}$ because $\frac{6}{2} = \frac{-3}{-1} \neq \frac{10}{9} \Rightarrow \frac{3}{1} = \frac{3}{1} \neq \frac{10}{9}$ Hence, lines are parallel to each other.

Page 10 of 18

Given: In \triangle ABC, DE || BC. Also AD = 6x - 7, DB = 4x - 3, AE = 3x - 3 and EC = 2x - 1 By basic proportionality theorem, $\frac{AD}{DB} = \frac{AE}{EC}$ $\Rightarrow \frac{6x-7}{4x-3} = \frac{3x-3}{2x-1}$ \Rightarrow (6x - 7)(2x - 1) = (3x - 3)(4x - 3)

 $\Rightarrow 12x^2 - 6x - 14x + 7 = 12x^2 - 9x - 12x + 9$ $\Rightarrow -20x + 7 = -21x + 9$ \Rightarrow -20x + 21x = 9 - 7 $\Rightarrow x = 2$

OR

It is given that, AB = 6 cm, AC = 8 cm, BD = 1.5 cm and CD = 2 cm We have to check whether AD is bisector of $\angle A$

aching First we will check proportional ratio between sides

So, $\frac{AB}{AC} = \frac{BD}{DC}$ $\Rightarrow \frac{6}{\circ} = \frac{1.5}{2}$ $\Rightarrow \frac{3}{4} = \frac{3}{4}$

Therefore, the sides are proportional. Hence, AD is bisector of $\angle A$

We know that the lengths of tangents drawn from an exterior point to a circle are equal. AP = AS, ... (i) [tangents from A] BP = BQ, ... (ii) [tangents from B] CR = CQ, ... (iii) [tangents from C] DR = DS. ... (iv) [tangents from D] AB + CD = (AP + BP) + (CR + DR)= (AS + BQ) + (CQ + DS) [using (i), (ii), (iii), (iv)]= (AS + DS) + (BQ + CQ)= AD + BC. Hence, AB + CD = AD + BC. 24. cosec $\alpha = \frac{1}{\sin \alpha} = \sqrt{2}$ $\operatorname{cosec} \beta = \sqrt{1 + \cot^2 \beta} = \sqrt{1 + 3} = 2$ \therefore cosec α + cosec $\beta = \sqrt{2} + 2$ or $\sqrt{2}(\sqrt{2} + 1)$ 25. Here, r = 45 cm and $\theta = \frac{360^{\circ}}{8} = 45^{\circ}$ Area between two consecutive ribs of the umbrella = $\frac{\theta}{360^\circ} \times \pi r^2$

$$=\frac{45^{\circ}}{360^{\circ}}\times\frac{22}{7}\times45\times45 = \frac{22275}{28}\,\mathrm{cm}^{\,2}$$

14 cr l = APB = 22 cm $rac{ heta}{180^\circ} imesrac{22}{7} imes14\,{=}\,22\mathrm{cm}$ $\Rightarrow \theta = 90^{\circ}$ Area of the sector = $\frac{lr}{2} = \frac{22 \times 14}{2} = 154 \text{ cm}^2$ Area of triangle AOB= $\frac{1}{2} \times OA \times OB = \frac{1}{2} \times 14 \times 14 = 98 \text{ cm}^2$ Area of the segment = (154 - 98) cm² = 56 cm² Section C 26. Numbers are of two types - prime and composite. Prime numbers can be divided by 1 and only itself, whereas composite numbers have factors other than 1 and itself. It can be observed that $7 \times 11 \times 13 + 13 = 13 \times (7 \times 11 + 1)$ ching & Guidance = 13 × (77 + 1)= 13 × 78= 13 × 13 × 6 The given expression has 6 and 13 as its factors. Therefore, it is a composite number. $7 \times 6 \times 5 \times 4 \times 3 \times 2 \times 1 + 5$ $= 5 \times (7 \times 6 \times 4 \times 3 \times 2 \times 1 + 1)$ = 5 × (1008 + 1)= 5 × 1009 1009 cannot be factorized further Therefore, the given expression has 5 and 1009 as its factors. Hence, it is a composite number. 27. Let $p(x) = 6x^2 - 3 - 7x$ For zeroes of p(x), p(x) = 0 $\Rightarrow 6x^2 - 3 - 7x = 0$ $\Rightarrow 6x^2 - 7x - 3 = 0$ $\Rightarrow 6x^2 - 9x + 2x - 3 = 0$ $\Rightarrow 3x(2x - 3) + (2x - 3) = 0$ \Rightarrow (2x - 3) (3x + 1) = 0 $\Rightarrow 2x - 3 = 0 \text{ or } 3x + 1 = 0$ $\Rightarrow x = \frac{3}{2} \text{ or } x = -\frac{1}{3} \Rightarrow x = \frac{3}{2}, -\frac{1}{3}$ So, the zeroes of p(x) are $\frac{3}{2}$ and $-\frac{1}{3}$ We observe that Sum of its zeroes $=\frac{3}{2}+\left(-\frac{1}{3}\right)=\frac{3}{2}-\frac{1}{3}$ $=\frac{9-2}{6}=\frac{7}{6}=\frac{-(-7)}{6}=-\frac{\text{Coefficient of }x}{\text{Coefficient of }x^2}$ Product of its zeroes = $\left(\frac{3}{2}\right) \times \left(-\frac{1}{3}\right)$ $=-\frac{1}{2}=-\frac{3}{6}=\frac{\text{Constant term}}{\text{Coefficient of }\mathbf{x}^2}$ 28. Let the unit's digit and the ten's digit in the two-digit number be x and y respectively. Then the number = 10y + xAlso, the number obtained by reversing the order of the digits = 10x + yAccording to the question, x + y = 9....(1)9(10y + x) = 2(10x + y) \Rightarrow 90y + 9x = 20x + 2y $\Rightarrow 11x - 88y = 0$ Page 12 of 18 BEST OF LUCK 👔 @vcgc.aligarh 🞯 @vcgc_aligarh 🥥 @VCGC Aligarh 💶 VCGC Online 🕞 📖 VCGC Online App

 \Rightarrow x - 8y = 0(2) Subtracting equation(2) from equation(1), we get 9y = 9 $y = \frac{9}{9} = 1$ \Rightarrow Substituting this value of y in equation (1), we get x + 1 = 9 $\Rightarrow x = 9 - 1 = 8$ Hence, the required number is 18. **Verification:** substituting x = 8 and y = 1, we find that both the equations (1) and (2) are satisfied as shown below: x + y = 8 + 1 = 9x - 8y = 8 - 8(1) = 0Hence, the solution is correct. OR Let the digits at units and tens place of the given number be x and y respectively. Then, Number = 10y + x(i) Number obtained by reversing the order of the digits = 10x + yOx ing & Guidance According to the question, (10y + x) + (10x + y) = 165 $\Rightarrow x + y = 15$ and, x - y = 3Thus, we obtain the following systems of linear equations. i. x + y = 15x-y=3ii. x + y = 15y-x=3Solving first system of equations, we get x = 9, y = 6Solving second system of equation, we. get x = 6, y = 9Substituting the values of x and y in equation (i), we have Number = 69 or, 96. - 25 cm D 29. S 38 cm Q в P←27 cm→ Given that ABCD is a quadrilateral such that $\angle D = 90^\circ$. BC = 38 cm,CD = 25cm and BP = 27 cm ∴ From the figure, BP = BQ = 27 cm [Tangents from an external point are equal] Now, BC = 38 \Rightarrow BQ + QC = 38 $\Rightarrow 27 + QC = 38$ ⇒ QC = 38 **-** 27 \Rightarrow QC = 11 cm Page 13 of 18

BEST OF LUCK [🚹 @vcgc.aligarh 🞯 @vcgc_aligarh 💙 @VCGC Aligarh 💶 VCGC Online 🕨 📰 VCGC Online App

 \therefore QC = 11 cm = CR [Tangents from an external point are equal] CD = 25 cm CR + RD=25 \Rightarrow 11+ RD = 25 ⇒ RD = 25**-**11 \Rightarrow RD = 14 cm Also, RD = DS = 14 cm [Tangents from an external point are equal] OR and OS are radii of the circle. From tangents R and S, $\angle ORD = \angle OSD = 90^{\circ}$ Thus, ORDS is a square. OR = DS = 14 cmHence, the radius of the circle, r = OR = 14 cm 30. We have to prove that, $\frac{\sin\theta - \cos\theta + 1}{\sin\theta + \cos\theta - 1} = \frac{1}{\sec\theta - \tan\theta}$ using identity $\sec^2\theta = 1 + \tan^2\theta$ $\mathbf{LHS} = \frac{\sin\theta - \cos\theta + 1}{\sin\theta + \cos\theta - 1} = \frac{\tan\theta - 1 + \sec\theta}{\tan\theta + 1 - \sec\theta}$ [dividing the numerator and denominator by $\cos\theta$.] $= \frac{(\tan\theta + \sec\theta) - 1}{(\tan\theta - \sec\theta) + 1} = \frac{\{(\tan\theta + \sec\theta) - 1\}(\tan\theta - \sec\theta)}{\{(\tan\theta - \sec\theta) + 1\}(\tan\theta - \sec\theta)}$ [Multiplying and dividing by $(\tan\theta - \sec\theta)$] $\frac{(\tan^2\theta - \sec^2\theta) - (\tan\theta - \sec\theta)}{\{(\tan\theta - \sec\theta) + 1\}(\tan\theta - \sec\theta)} [\because (a-b)(a+b) = a^2 - b^2]$ $\frac{1 - \tan\theta + \sec\theta}{(\tan\theta - \sec\theta + 1)(\tan\theta - \sec\theta)} [:: \tan^2\theta - \sec^2\theta = -1]$ & Guidance $-(\tan\theta - \sec\theta + 1)$ -1 $\overline{(\tan\theta - \sec\theta + 1)(\tan\theta - \sec\theta)}$ $\tan\theta - \sec\theta$ $\frac{1}{\sec\theta - \tan\theta} = \mathbf{RHS}$ = Hence Proved. i. Let E_1 be the event of getting two numbers whose sum is 5.

Then, the favourable outcomes are (1,4) (2,3), (3,2), (4,1). Number of favourable outcomes = 4.

 \therefore P(getting two numbers whose sum is 5)= $P(E_2) = \frac{4}{36} = \frac{1}{9}$

ii. Let E_2 be the event of getting even numbers on both dice.

Then, the favourable outcomes are

(2,2), (2,4), (2,6), (4,2), (4,4), (4,6), (6,2), (6,4), (6,6). Number of favourable outcomes = 9. \therefore P(getting even number on both dice) = $P(E_2) = \frac{9}{36} = \frac{1}{4}$

iii. Let E_3 be the event of getting a doublet.

Then, the favourable outcomes are

(1,1), (2,2), (3,3), (4,4), (5,5), (6,6). Number of favourable outcomes = 6. ∴ P(getting a doublet) = P) = $P(E_3) = \frac{6}{36} = \frac{1}{6}$.

Section D

OR

32. Let the width of the path be x m

Length of the field including the path = (20 + 2x) m Breadth of the field including the path = (14 + 2x) m. Area of rectangle = L × B

Area of the field including the path = $(20 + 2x) (14 + 2x) m^2$.

Area of the field excluding the path = (20×14) m²= 280 m².

 $\therefore \text{ Area of the path} = (20 + 2x)(14 + 2x) - 280$ (20 + 2x)(14 + 2x) - 280 = 111 $\Rightarrow 4x^2 + 68x - 111 = 0$ Factorise the equation, $\Rightarrow 4x^2 + 74x - 6x - 111 = 0$ $\Rightarrow 2x(2x + 37) - 3(2x + 37) = 0$ $\Rightarrow (2x + 37)(2x - 3) = 0$ $\Rightarrow x = -\frac{37}{2} \text{ or } x = \frac{3}{2}$ As width can't be negative. $\Rightarrow x = \frac{3}{2} = 1.5$ Therefore, the width of the path is 1.5 m.

Let the original list price be Rs x \therefore No. of books bought for Rs $300 = \frac{300}{x}$ Reduced list price of the book = Rs (x - 5) No. of books bought for Rs $300 = \frac{300}{x-5}$ According to question, $\frac{300}{x-5} - \frac{300}{x} = 5$ $\Rightarrow \frac{300x-300x+1500}{x^2-5x} = 5$ $\Rightarrow x^2 - 5x = 300 \Rightarrow x^2 - 5x - 300 = 0$ $\Rightarrow x^2 - 20x + 15x - 300 = 0$ $\Rightarrow (x - 20)(x + 15) = 0$ $\Rightarrow x = 20$ or x = -15 $\Rightarrow x = 20$ The negative sign is rejected. Therefore x = 20 Therefore the original price list is Rs. 20
